

Hepatitis B (HBV) Vaccine for Grade 6 Students

This vaccine will be offered at school to kids who are 11-12 years old.

What does this vaccine do?

The **HBV vaccine** protects against **hepatitis B virus** which causes an infection in the liver. For some people, this infection does not go away. This can lead to:

- **Liver damage**
- **Liver cancer**
- **Death**

3 reasons to get the HBV vaccine at school

1

It works! The HBV vaccine is very good at preventing infections that could make your child very sick and lead to serious health outcomes.

2

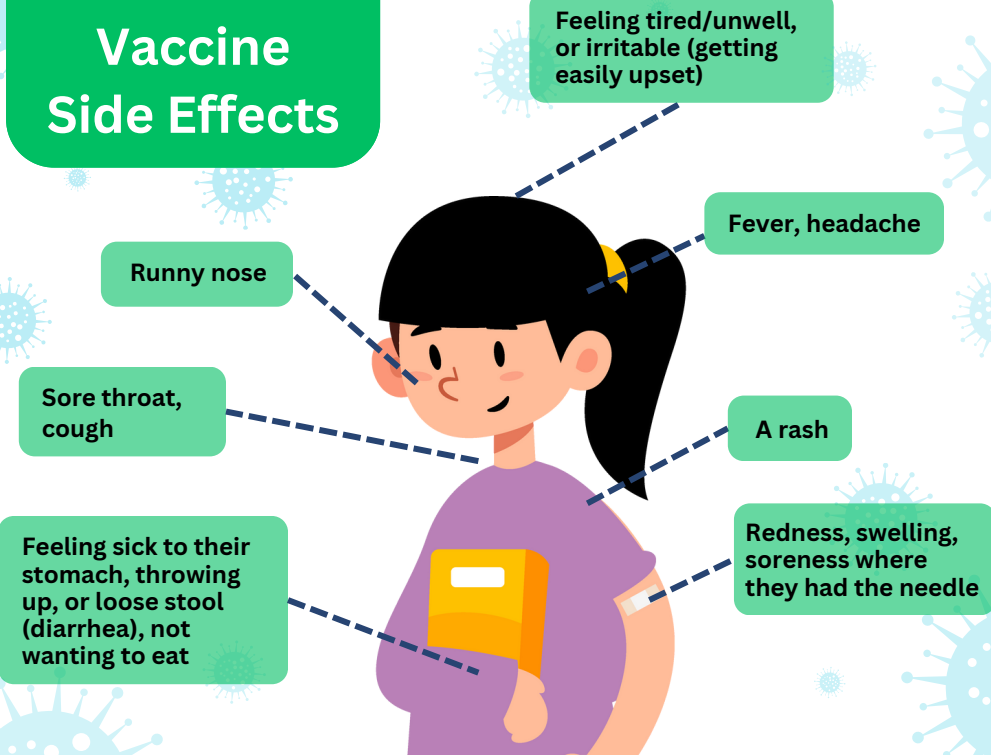

It's safe! Canada has a very good system to ensure vaccines are safe. It is much safer for your child to get the HBV vaccine than to get infected.

3

It's easy! A nurse will give your child the vaccine at school if you sign and return the consent forms. You won't have to take them to get the vaccine yourself.

Note: If your child missed this vaccine at school, contact your local public health unit.

Possible Vaccine Side Effects

Vaccine side effects are common. Most are mild and will go away in a few days.

If your child has any side effects you can:

- Put a cool, wet cloth where they had the needle
- Give them medicine for pain and fever

HPV-9 Vaccine for Grade 6 Students

This vaccine will be offered at school to kids who are 11-12 years old.
